

NIKHIL ASHISH SHAH

shah1534nikhil@gmail.com — +91-8888599484 — GitHub — LinkedIn

Professional Summary

Computer Science graduate with hands-on experience in Python, SQL, data analysis, machine learning, and dashboard development. Skilled in data cleaning, exploratory data analysis (EDA), statistical analysis, SQL querying, and data visualization. Currently pursuing a Data Science & AI program to further develop expertise in data analytics and machine learning.

Skills

- **Programming:** Python, SQL (MySQL)
- **Libraries:** Pandas, NumPy, Matplotlib, Scikit-learn, Scipy
- **Data Analytics:** Data Cleaning, Data Wrangling, EDA, Statistical Analysis, Feature Engineering
- **Machine Learning:** Logistic Regression, Classification, TF-IDF, NLP (Basics)
- **Visualization:** Power BI, Matplotlib
- **Spreadsheet Tools:** Google Sheets, Microsoft Excel
- **Google Workspace:** Gmail, Google Docs, Google Sheets
- **Cloud/Tools:** AWS (EC2, S3), Jupyter Notebook, Google Colab

Technical Experience

- Cleaned, transformed, and analyzed datasets containing over 80,000 records using Python, Pandas, and NumPy.
- Performed EDA and SQL queries for filtering, aggregation, joins, and reporting.
- Identified trends and anomalies in datasets to support data-driven decision making.
- Built and evaluated classification models using Scikit-learn.
- Developed visualizations and dashboards to communicate analytical insights.
- Documented analysis results and worked with Jupyter Notebook and Google Colab for end-to-end data analysis workflows.

Projects

ToneCheck – Sentiment Analysis Model

- Built a sentiment analysis model using Python, TF-IDF, and Logistic Regression on a dataset of 50,000+ customer reviews.
- Performed data cleaning, text preprocessing, feature extraction, and model evaluation using Pandas, NumPy, and Scikit-learn.

Brain Tumor Detection – Image Classification Model

- Developed a machine learning model to classify MRI brain images using a dataset of 80,000+ images.
- Performed image preprocessing, model training, and evaluation using Python, Pandas, NumPy, and Scikit-learn.

Ideafy – AI-Powered Startup Analysis Platform

- Developed a full-stack web application that collects startup information and generates AI-powered business analysis.
- Integrated AI APIs and designed dashboards to provide structured insights for data-driven business decision making.

Education

MIT ADT University, Pune

B.Tech – Computer Science and Engineering

Expected Graduation: 2026

2022–2026

Certifications

- Masai School – Data Science & AI (In Progress)
- Microsoft Certified – Power BI Data Analyst Associate
- IBM – Introduction to Data Analytics
- AWS Academy – Cloud Foundations
- NPTEL – Computer Vision
- Cisco – Networking Basics
- IT Specialist – Databases (Certiport / Pearson)
